Customer-specific trolleys

You sometimes need more than a standard shopping trolley model. For example, when you are working with extra heavy loads. Or when your customers have to transport fragile products, such as plants in a garden centre. DCR Europe supplies exactly the right shopping trolleys for those special situations. Or, as we call them: the specials.

DCR Europe is also the ideal partner when you want to give your customers that extra little bit of service.

For example, how about a special shopping trolley for wheelchair users? The trolley is attached to the wheelchair so that the customer has maximum freedom of movement. For your elderly customers, we produce shopping trolleys with a higher basket. Then they don't have to bend to put things in the trolley. DCR Europe can even design a completely new shopping trolley model for you. Ask your account manager about all the possible options.

There's one thing you can be sure of: DCR Europe's shopping trolleys are not expensive and they comply with the highest quality standards.

Double Layer

- * Scannerbrackets
- * Bumpers and crate detection

All trolleys can be color coated in almost all RAL colors

DLT Double Layer Trolley for gardencenter

The standard DLT design includes two baskets and a base grille. That means that your customers will have plenty of extra space in their shopping trolleys! The result? A higher turnover. This double-decker is particularly suitable for garden centres because plants require a relatively large amount of space. Thanks to the two baskets, plants can be transported without the risk of damage. The base grille provides space for heavier products such as sacks of garden soil.

The DLT shopping trolley is manufactured from steel wire and flat-oval tube. The metal is high-gloss galvanised and chromated and has a transparent powder coating. There are many options available, such as roller wheels, different types of coin locks and a child seat in the upper basket.

Heavy Duty Trolley

The undercarriage and large base grille of the Heavy Duty Trolley (HDT) are manufactured so that they are extra sturdy. This rock-solid shopping trolley has a carrying capacity of 150 kg and is suitable for almost every shop space. The flat base grille is optimally accessible and includes space for three crates. The great strength of the HDT is the large number of standard options and extra possibilities.

The HDT shopping trolley is high-gloss galvanised and chromated and has a transparent, abrasion-proof powder coating. The rear flap is fitted with a child seat at no extra cost. Other standard options include hand-grips in 9 different colours, plastic protective edges and corners, and a bag hook. Also available without a base grille.

Senior trolley

The Senior shopping trolley has a high-mounted shallow basket. This means that your customers don't have to bend down to put products in the basket or remove them. So this sturdy, stable shopping trolley is very suitable for your older customers.

The senior trolley is manufactured from steel wire and flat-oval tubes according to the EN 1929 quality standard. There are many options available at no extra cost, such as a plastic protective profile on the top edge, a bag hook, plastic corner guards, and wheels with a rubber tread and ball-bearings. The plastic components are available in 9 different colours. Extra options include various types of coin locks, roller wheels and a hand-grip with space for advertising.

Scanner FR

The FR Scanner was developed by DCR Europe in cooperation with a large supermarket chain. This self-scanning trolley has space for 4 folding crates or 3 folding crates and a beer crate. The trolley has a scanner holder as standard. With the FR Scanner, your customers enjoy the maximum benefits from self-scanning: no delays at the checkout and the crates can be loaded directly into the car boot so that loading and unloading also cost less time. One additional advantage for you is the extra turnover from the sale of folding crates. The FR Scanner is manufactured from high-gloss galvanised, chromated steel wire and flat-oval tubes and has a transparent powder coating. This shopping trolley complies with the European EN 1929 quality standard for shopping trolleys.

Move to improve

Help your customers to have an enjoyable shopping experience with smooth-rolling, accurately steering shopping trolleys. Such as the shopping trolleys from DCR Europe. Our trolleys have top-quality wheels and always go where you want them to go.

The standard wheels have a rubber tread and are fitted with precision ball-bearings so that they have a low rolling resistance. Available as fixed wheels and as caster wheels with sealed upper bearings. Soft plastic protective rings on the wheels and on the upper bearings protect the wheels against abrasion, dust and damage. A number of shopping trolley models have coloured plastic hubcaps as additional protection. The wheels are available in sizes of 100 mm or 125 mm

Euronorm 1929

The trolleys are produced and tested under the international quality guide for shopping trolleys EN 1929.

This guarantees you constant high quality products.
