

Transport trolleys

Transport trolleys

Every shop has its own specific requirements for internal mobility. Do your customers have to transport larger products through your shop and to their vehicles? Or do they need to transport products with unusual dimensions, or heavier objects? Then you need specialised transport trolleys.

DCR Europe produces transport trolleys for every conceivable situation. For example, flat trolleys without side grilles. Which are very suitable for transporting long, protruding objects. These transport trolleys have extra-long, flat loading bases and a carrying capacity of an impressive 500 kilos.

Special situations demand special transport solutions. That is why we produce transport trolleys with multiple options. Such as adjustable grilles that can be folded down, when necessary. Extra baskets for the smaller products. Trolleys for sheet materials with a tube rack that can be used to easily transport large sheets in an upright position.

The transport trolleys are produced in accordance with the strict European EN 1929 quality standards. And all at DCR Europe's inexpensive prices! Needless to say, your transport trolleys can be fully finished according to your requirements and wishes. Your account manager would be happy to discuss all the possible options with you.

in almost all RAL colors

FBTS

For many years, the extremely economical FBTS Flatbed Trolley transport trolley has proved its worth with the excellent service it has provided in many shops. The FBTS has a load capacity of 250 kilos! The flat loading base is extremely suitable for the transport of large objects and products with unusual shapes. Your customers can transport smaller products in the basket. This transport trolley is manufactured from steel wire and flat-oval tube materials. The metal is high-gloss galvanised and chromated and has a transparent powder coating. The plastic hand-grip and the hand-grip caps are available in four standard colours. The FBTS has many optional extras, such as a hand-grip with space for advertisements, various coin locks, colour powder coating and walkway wheels.

FBTB B75

The FBTB Flatbed Trolley transport trolley has a flat base grille and a shallow, high-mounted folding basket. This transport trolley therefore has plenty of space for larger boxes and crates. Your customers can also transport smaller products in the basket. The FBTB is a versatile transport trolley that is ideal for many types of shops, such as garden centres and hardware stores.

The FBTB Flatbed Trolley is manufactured from steel wire. The metal is high-gloss galvanised and chromated and has a transparent powder coating. The FBTB runs on castors with ball-bearings and has a load capacity of an impressive 250 kilos. The plastic hand-grip caps are available in four standard colours. A number of different options are available.

FBTM 5 wheels

The FBTM Flatbed Trolley transport trolley has a flat loading grille and is one metre long. It has a load capacity of an impressive 500 kilos. Add the spacious basket and the optional front rack that folds down and it soon becomes obvious: the FBTM Flatbed Trolley can be used in many different ways. The fixed fifth wheel ensures that the trolley is easy to steer and always rolls straight ahead. Even when carrying heavy loads.

This robust transport trolley is manufactured from steel wire. The metal is high-gloss galvanised and chromated and has a transparent powder coating. The trolley is fitted with 4 castors and 1 fixed wheel, all with ball-bearings. There are many additional options available.

S3

Thanks to its open structure, the S3 Flatbed Trolley transport trolley is extremely suitable for transporting large flat objects, such as planks, sheets and tubes. The two fixed wheels on the back make the S3 easy to steer. The brackets provide support for upright planks and sheets so that customers can transport them easily. These features make the S3 an ideal addition to the trolley fleets of hardware and DIY stores.

The S3 Flatbed Trolley has a load capacity of 500 kilos. The wheels are fitted with ball-bearings. The trolley has a wooden loading base, is high-gloss galvanised and chromated, and has a transparent powder coating. There are numerous options available, including powder coating in your house colours.

Move to improve

Help your customers to have an enjoyable shopping experience with smooth-rolling, accurately steering shopping trolleys. Such as the shopping trolleys from DCR Europe. Our trolleys have top-quality wheels and always go where you want them to go.

The standard wheels have a rubber tread and are fitted with precision ball-bearings so that they have a low rolling resistance. Available as fixed wheels and as caster wheels with sealed upper bearings. Soft plastic protective rings on the wheels and on the upper bearings protect the wheels against abrasion, dust and damage. A number of shopping trolley models have coloured plastic hubcaps as additional protection. The wheels are available in sizes of 100 mm or 125 mm

Euronorm 1929

The trolleys are produced and tested under the international quality guide for shopping trolleys EN 1929.

This guarantees you constant high quality products.
